## Southmed-EVAC HF

**A biological breakthrough for cleaning hospital drains and traps. Southmed-EVAC HF is a ready to use proprietary bioformulation designed specifically for difficult drain line treatment**

### **Southmed-EVAC HF advantages:**

- Advanced drain line treatment and odor control
- Enhanced aerobic & anaerobic performance
- General organic waste degrader
- An EcoLogo certified product, reviewed for safety & performance by Terra Choice Environment Canada
- Inhibits the production of corrosive gasses that can damage your drain lines
- Available sizes: 4L and 208L

Item Numbers:

Southmed-EVAC HF-4 (4 Litre)

Southmed-EVAC HF-208 (208 Litre)

**Southmed-EVAC HF**

Made from Eco Friendly Non-PVC Material

# Southmed-EVAC HF Product Profile

- Product:** Ready to use proprietary bioformulation for difficult drain line treatment, evacuation lines, wet wells and sewage injection pins.
- Description:** **Southmed - EVAC HF's** proprietary formulation incorporates specialized microorganisms in combination with biological support ingredients and essential growth factors. This unique formulation promotes improved performance in heavily soiled environments providing accelerated microbial germination and outgrowth that result in enhanced solids degradation in both aerobic and anaerobic environments.
- Function:** **Southmed – EVAC HF** incorporates an innovative proprietary inhibitory system that allows for excellent product stability but upon product dilution these inhibitory ingredients now function as an essential growth stimulant that promotes superior germination and outgrowth.
- Packaging:** 4-litre jug, and 208-litre drum

## Features

## Benefits

- Highly Concentrated** • **Southmed – EVAC HF's** is a highly concentrated bacterial formulation with a bacterial count of 550 to 600 billion microorganisms per gallon.
- Digestion of Debris** • **Southmed – EVAC HF's** bioformulation accelerates digestion of fats, oils and grease organic matter under aerobic and anaerobic conditions that exist in drain lines, evacuation lines, wet wells and lift stations. Southmed – EVAC HF outperforms leading competitive products.
- Odor Control** • **Southmed – EVAC HF's** is specially designed to block production of Odor by naturally occurring indigenous bacterial populations. The unique formulation inhibits the normal biological production of Odor causing gases that are associated with anaerobic conditions in traps and drain lines.
- Performance Benefits**
- Superior biodegradation which outperforms other competitive formulations in laboratory and field studies
  - Superior germination and outgrowth results in increased bacterial activity in a variety of organic waste applications
  - Accelerated enzymatic degradation allows the multiple spore blend to work faster and more effectively
  - Enhanced aerobic and anaerobic performance. Ideal applications subject to aerobic and anaerobic environments
  - General Organic waste degrader
